CASE STUDY

Metering pump packages under steam for New Caledonia

Kelair Pumps has designed and built two chemical metering packages for Alstom Power Australia. The units will inject various treatment chemicals as part of the boiler steam unit bound for Goro Nickel in New Caledonia.

The dosing pumps are the reliable Pulsafeeder Pulsa range in 316 Stainless Steel materials, with manual stroke adjustment.

Kelair has now designed many of these packages which are built to our customers' requirements. They include chemical storage tanks, pulsation dampeners, relief valves, all other instrumentation, valves, pipes and fittings, and all assembled on a common fabricated base-frame.

Similar to the units bound for Goro Nickel is the Kelair-designed metering package (pictured above and below) built for Perth's Worsley Alumina.
