### Plumbing contractors take note! Enviroplumber™ Trade Day Sat 2nd July 2005

Kelair Pumps, along with Brown Brothers Engineers Australia Pty Ltd, will be exhibiting at the above trade day. The trade day will introduce the new approach to the future of plumbing (Enviroplumber™), which assists plumbing contractors to better understand the regulations and requirements for water and energy conservation, with a strong focus on the basics of sustainability.

The Master Plumbers Association of NSW reports that "Enviroplumber™ is not a quick fix or short-term solution to the current water shortage problems.

Enviroplumber™ is the holistic approach to water and energy conservation, and as such, is backed by an accredited course 'Sustainable Plumbing Practices' developed by TAFE NSW under contract from the Master Plumbers Association of NSW."

As an exhibitor, Kelair and Brown Brothers will be required to provide the Association with a specific feature or capability unique to our company's products, which will be incorporated as a question into the Assessment Task for course participants.

Kelair/Brown Brothers will be exhibiting a pressure system working model.

*Kelair's Packaged Variable-Speed-Drive and Fixed-Speed-Drive Pressure Systems designed to draw water from tanks, dams, rivers and direct connection to town's main to provide flow and pressure requirements by conventional system or one operating as a variable speed drive unit.*
