Pulsafeeder's OMNI range all-powerful

Pulsafeeder has released its new OMNI range which is designed to be an economical, compact, rugged, simple and reliable diaphragm metering pump alternative.

OMNI metering pumps and MPC controls are the economical standard for a reliable chemical feed pump with virtually no maintenance. The OMNI offers the user oil-free operation by using greased-for-life components, is very compact and light weight saving space, with easy handling, and can be accurately controlled via a Pulsafeeder Metering Pump Controller (MPC).

The OMNI range has a flow range up to 443LPH and a maximum pressure of 10 Bar and comes with either PVC or 316 Stainless Steel liquid-end materials and a PTFE diaphragm. As with all other Pulsafeeder pumps, this range incorporates a cartridge ball valve arrangement which improves the accuracy of the metering pump. The OMNI has an accuracy of +/- 2% of flow.

The range incorporates two housings and four pump head sizes thus minimizing the stock holding requirements and providing much quicker deliveries to Kelair's customers.

Markets that will benefit from this are the Pulp and Paper industries in all areas of process chemical injection, Water and Wastewater to meter chemicals into water supply lines, and Power and Energy companies for boiler water treatment.
